

Accession Screening and Immunization Program

Dosing Schedule for MMR and Varicella Vaccines

Measles (Serology Result)	Rubella (Serology Result)	Dosing Schedule
Negative (-)	Negative (-)	Two doses of Measles, Mumps, Rubella (MMR) vaccine (0, 10 weeks)
Negative (-)	Positive (+)	Two doses of Measles, Mumps, Rubella (MMR) vaccine (0, 10 weeks)
Positive (+)	Negative (-)	Two doses of Measles, Mumps, Rubella (MMR) vaccine (0, 10 weeks)
Positive (+)	Positive (+)	No Measles, Mumps, Rubella (MMR) vaccine required

Varicella (Serology Result)	Dosing Schedule
Negative (-)	Two doses of Varicella Zoster Virus vaccine (0, 4 weeks)
Positive (+)	No Varicella Zoster Virus vaccine required

Accession Screening and Immunization Program

Dosing Schedule for Hepatitis A & B Vaccines

Hepatitis A Serology Result	Hepatitis B Serology Result	Dosing Schedule
Negative (-)	Negative (-)	<p>≥ 18 years of age: One initial dose of bivalent hepatitis A/B vaccine (1.0 mL) and then the next two doses (1.0 mL) at 1 month and 6 months from the initial dose</p> <p>If < 18 years of age, then administer the monovalent vaccines per schedule as shown below.</p>
Negative (-)	Positive (+)	<p>< 19 years of age: One initial dose of monovalent hepatitis A vaccine (0.5 mL) and a booster dose (0.5 mL) between 6 to 12 months later</p> <p>≥ 19 years of age: One initial dose of monovalent hepatitis A vaccine (1.0 mL) and a booster dose (1.0 mL) between 6 to 12 months later</p>
Positive (+)	Negative (-)	<p>< 20 years of age: One initial dose of monovalent hepatitis B vaccine (0.5 mL) and then two doses (0.5 mL) at 1 month and 6 months from the initial dose</p> <p>≥ 20 years of age: One initial dose of monovalent hepatitis B vaccine (1.0 mL) and then two doses (1.0 mL) at 1 month and 6 months from the initial dose</p>
Positive (+)	Positive (+)	No hepatitis vaccine required

Note: Hepatitis A immunity determined from results of total anti-HAV (IgG+IgM); Hepatitis B immunity determined from results of HBSAb (IgG).
