ESSENTRIS®

MILITARY'S INPATIENT DOCUMENTATION SOLUTION

The military's inpatient electronic health record is used in acute hospital environments, providing point-of-care data capture at the patient's bedside for physiological devices, fetal/uterine devices, ventilators and other patient care machines.

Essentris® now known as CIS, allows worldwide documentation of inpatient care for all service members and their beneficiaries. The CCI|EHR which is the latest CIS baseline is used to assist injured service members returning from Theater to Landstuhl Regional Medical Center in Germany for acute care. Information captured in CIS is accessible to other providers across the continuum of care via JLV and AVHE, ensuring continuity of care for service members returning to the U.S. for additional care in the Departments of Defense (DoD) and Veterans Affairs (VA) facilities. CIS helps reduce the majority of paper-based inpatient documentation at DoD military treatment facilities. The use of this solution allows for standardization of processes and sharing of documentation across DoD and VA treatment facilities.

Did You Know?

In 2021, CIS will begin rolling out a new standardized content catalogue to bring all MTFs into a single configuration.

The local Global Data Repository (GDR) is being replaced with a centralized solution aimed at providing enhanced data access capabilities.

Key Features

- ▶ Allows real-time monitoring of heart, fetal and other critical data
- ▶ Shares data with AHLTA and VistA users via the Data Exchange Service (DES)
- ▶ Interfaces with the Composite Health Care System (CHCS)
- ▶ Includes HL7 inbound ADT (Admission, Discharge, Transfer), laboratory results and radiology text interpretation from CHCS
- ▶ Allows real-time data back up for every single transaction through the Transactional server
- ▶ Print2PDF - allows the local CIS server to convert patient charts and data into an aggregated portable document format (PDF) file for easy electronic transfer or dissemination of the patient's chart history between hospitals or healthcare providers
- ▶ Provides enhanced order entry workflow as well as task lists, notifications and user preferences

Key Benefits

- ▶ Enhances the provision of care to ill and injured service members
- ▶ Enhances the delivery of patient care interoperability with the VA
- ▶ Ensures continuity of care to ill and injured service members
- ▶ Enhances medical readiness
- ▶ Increases clinical and administrative efficiency
- ▶ Provides enhanced order entry workflow as well as task lists, notifications and user preferences
- ▶ Remote access via Application Virtualization Hosting Environment to all sites available for all authorized users
