CHAIR
Brigid McCaw, MD, MPH, MS*

Greg Ator, MD

**RADM (Ret.) Wanda Barfield,
MD, MPH**

Rosemary Gibson, MS

Reshma Gupta, MD, MS

**COL Lee Norman,
MD, MHS, MBA**

**Col (Ret.) Michael Parkinson,
MD, MPH***

*Board Member

Tasking

On May 2, 2022, the Acting Assistant Secretary of Defense for Health Affairs directed the Defense Health Board (“the Board”) to **review the current state of virtual health from a strategic and tactical perspective and provide recommendations on optimizing virtual health decision making and implementation.**

Background

- Virtual Health (VH) in the MHS has moved from collaboration among Component programs to a single programmatic approach.
- The targeted use of Virtual Health (VH) capabilities expanded during the COVID-19 pandemic.
- Research suggests VH enhances MHS medical force optimization, particularly with respect to patient access and satisfaction.
- The MHS strategic plans should guide future investment and implementation of VH throughout the system.

Objectives and Scope

- Review current state of VH from a strategic and tactical perspective.
- Provide recommendations for optimizing VH decision making and implementation.

Summary of Activities to Date

- March 30, 2022 briefing to DHB on the background of VH in the MHS by Lt Col Nathan Reynolds
 - VH only when clinically feasible, will not replace face-to-face healthcare
 - DHA has identified four factors that can inform VH decision making going forward:
 1. Operational need
 2. Support of high-volume, high-risk, or high-cost care to maximize cost reduction
 3. Reduction in private sector cost
 4. Reduction in unnecessary health care utilization
 - Three main capabilities:
 1. Patient-to-provider
 2. Provider-to-provider
 3. Complex, real-time monitoring

Areas of Interest (1 of 2)

Topic	Discussion Point
Issues with health care access and equity	<ul style="list-style-type: none">• Rural and Geographically isolated areas – technology deserts and limited access to providers• Some populations may have limited technological knowledge• Some populations may not have technological tools or limited to mobile
Diverse Population	<ul style="list-style-type: none">• Beneficiaries – wide range of age and demographics• Variety of health care needs
Primary care, behavioral health, specialty care	<ul style="list-style-type: none">• Primary care, dermatology, and mental health more accessible as VH than some specialty care• VH can provide initial visits, follow up appointments, and other visits based on type of specialty care• Dearth of providers in some specialties, e.g., mental health
Value-based care	<ul style="list-style-type: none">• Focus on quality of care and how VH can improve patient outcomes• Decrease fragmentation by changing workflow

Areas of Interest (2 of 2)

Topic	Discussion Point
Virtual Health technological advances	<ul style="list-style-type: none">• What new VH technologies are available• How might these be used in the MHS• What does the VH technology future look like—VR, AI, etc.
Implementation in large systems	<ul style="list-style-type: none">• Look to large health care organizations for best practices to implement VH• Analyze lessons learned by the large health care organizations
Strategic planning	<ul style="list-style-type: none">• Utilize knowledge gained from the large health care organizations who have successfully implement system with VH• Determine how best to implement changes and innovations for VH in the MHS• Create workflows and metrics to determine effectiveness of VH in the MHS• Consider sustainability to ensure long-term VH use

Way Ahead

- Health Care Delivery Subcommittee Kick-Off Meeting: June 29, 2022
- Regularly scheduled Subcommittee meetings with briefings and report development discussion
- Anticipated briefings to Subcommittee on:
 - Benefits and risks associated with VH for the diverse population of the MHS (direct care and purchased care)
 - Trends in decision making regarding VH implementation for large health care systems
 - Technology advances and overcoming challenges implementing VH
 - Future trends in VH – how to predict and how they may meet the needs of the MHS across the board
 - Strategies moving forward to optimize VH in the MHS
